NotWired

Empowering the Mobile Lifestyle™

Features Overview

- Calendar event propagation
- Contact data propagation
- Integrated links to host site
- Redundant data backup
- Notification and alert options
- iCal and vCard support
- Calendar service integration
- Actionable messages
- Easy and flexible integration
- Support of standards

Benefits Overview

- Improved customer service
- Lower development time and costs
- Support worldwide messaging standards
- Support new calendar web sites as they become available
- Support new devices as they become available
- Fast implementation

NotWired Data Propagation Services

Move information to where your customer's want it

The NotWired Data Propagation Service is the first full-service offering to provide a web site with capabilities to move calendar and contact data to any remote online system, PDA or supported wireless devices.

NotWired is the only solution that provides data propagation services and an optional integrated calendar system. With NotWired, your web site can offer more robust services to your customers.

Calendar event propagation
Make it convenient for your customers to place your reservation on a calendar of their choice -- NotWired will allow you to do that with minimal effort from your development staff.

Contact data propagation
For your customers convenience, you can make contact data (name, address and phone numbers) available for customers to place into their online address book or transmit to their PDA or cell phone.

Integrated links
If your service supports direct linking to an event or reservation, this information can be placed into the calendar event so your customer has easy access to your system.

Redundant data backup
NotWired can store the event information for your customers. In the event that their target calendar is not available, NotWired will use the stored information to make an attempt at a later date. If NotWired is not successful, it will notify your customer with an email so they have the event information. Customers also can return to the NotWired and see the data that have been moved to other systems.

Notification and alerting options
NotWired is capable of delivering reminders to email or any device supporting one-way and two-way messaging.

iCal and vCard support
ICal is the standard for representing calendar event information. VCard is the standard defined for transmission of contact information like name, address and phone number. NotWired supports both.

Calendar service integration
NotWired can provide an integrated calendar system for your site. This system can be customized to match your site's look and feel. All data propagation can be made to place information on your site along with other target sites and devices.

Actionable messages
More advanced devices support two-way messaging. With this capability, users will be able to receive actionable messages. Actionable messages will allow the development of applications with support for instant up-to-date confirmation tracking. Actionable messages enable booking applications, m-commerce, advertising and personal organization applications to name a few.

Easy and flexible integration
NotWired only requires integration of scripts to your web pages. A simple script will invoke the NotWired data propagation.

Support of standards
NotWired support iCal and vCard standards. We support javascript and VBscript for integration. All transactions to NotWired are simple HTTP requests.

NotWired

Empowering the Mobile Lifestyle™

Supported Sites and Devices

- NotWired
- AOL
- Yahoo!
- MSN
- All ical supported software – Outlook, Notes, ACT! and more…
- All ical supported devices – some Nokia models and upcoming models from Motorola.

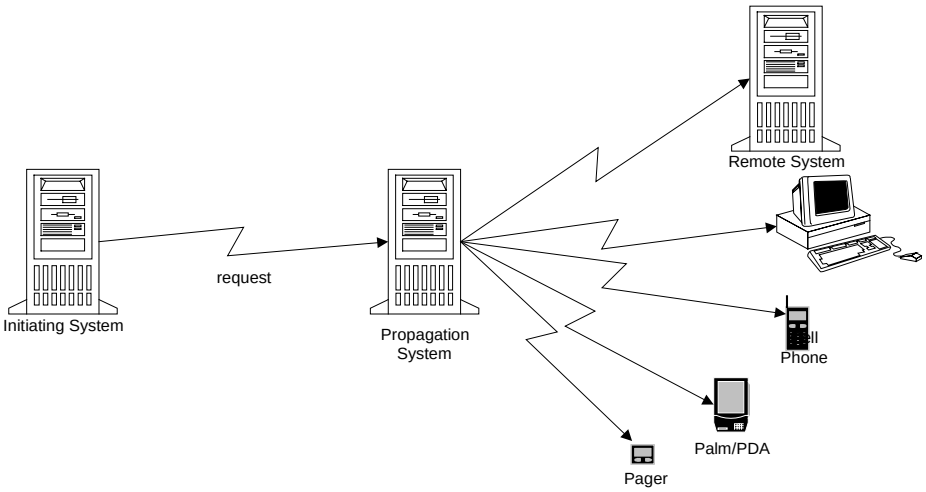
NotWired Architecture



NotWired takes a standard request from your site, stores it, translates it and moves it to the location controlled by the end user. The propagation system comes with complete tools for end user to control their profile while controlling and monitoring their transmissions. Any transmission errors will warn the end user or will retry until successful.

NotWired Benefits

Improved customer service
Your web site is one of your many facing technologies. Customers want great support and the best service available. NotWired improves the experience your customers have on your web site by providing them simple and convenient means to move data to their system of choice.

Lower development time and costs
Why do you want your developers building interfaces to potentially hundreds of web sites, several PDAs and a multitude of cell phones? NotWired propagation services hides complexity in one simple unified interface that takes weeks, not months or years, to implement.

Support worldwide messaging
CDMA, TDMA and GSM. They are all different and depend on different gateways and infrastructures. Worldwide messaging requires support for the world's standards. NotWired supports worldwide standards.

Support many sites and devices
Each site and device has its own capabilities and limitations. NotWired will focus on the delivery of messages, calendar data and contact data to those major sites and devices so you won't have to.

Fast implementation
Simply add a script NotWired gives you to propagate data to NotWired. The NotWired team will create a custom implementation to match your site.

We want to help you empower your customers. For more information, please visit http://www.notwired.com/products/data.
